

In this lecture, you will learn -

1. How to install Jupiter notebook, and it's working.
2. How to declare variables and different available datatypes
3. How to perform different arithmetic operations
4. How to take input from users in a program

Outcome-

By the end of this lecture, you will be able to create a basic user input program in python.

To make the best use of this lecture, we advise you to keep the following points in mind -

Take Notes: While you are watching a video, it is always good to have a pen and paper to note all the important concepts covered in the video. It will help you remember those concepts better.

Additional Resources: We have covered all the important concepts through videos and notes, but it is always better to explore some additional resources available online. We have compiled some notes after the video lecture for your reference.

Try it yourself: After watching the video try to practice the same. You can write your additional programs to understand concepts for better understanding.
